About Me :

I am currently frontend and solidity developer, I bring three years of hands-on expertise to the table.have done several projects that you can see inside my github and more regularly see it on my portfolio website , everything with the details like my skills and projects and communication channels in the portfolio .

Portfolio :

I have created a portfolio page which is the main place to share my portfolio .But I share them in other places as well, like Github and

Site : https://www.alirezasoltanian.ir

Github : https://github.com/alirezasoltanian

SKILLS :

Front-End :
(Typescript, Javascript, React, Nextjs, Zustand, Css, Html ,Sass, Tailwind, Tanstack query, shadcnUI, ai-sdk)

Back-End :
(Node , Express , Prisma & Drizzle ,Docker, openai-sdk, ai-sdk)

UI/UX :
(Figma , Photoshop)

Experience :

Archivira: 6 months in an Canadian multi-platform startup, It is an architectural service, I developed it with nextjs14 And I used various other tools. The challenge was more Security section of admin portal and user account management It was from server action in different parts of the website.

Kasbino: I worked for 8 months on a management dashboard and developed a tool for creating UI using Drag & Drop, which served as a UI Builder for management dashboards. The main challenge in this project was controlling and managing the Drag & Drop elements without using pre-built packages.

Dideban: A tool for the Divar platform that intelligently notifies users about new listings and important updates (such as price or description changes). Notifications are delivered via chat and push alerts, providing a fast experience without the need for constant searching.

Solop: Solop is a platform for creating online stores with features to manage orders, products, users, and payment gateways. The system includes an AI assistant and a store agent to make the buying and selling experience smarter and easier for both customers and vendors.
